

## ABSTRACT

The present invention relates to a pump system for delivering water from a river, a reservoir, or the like to another place. A pump system 1 according to the present invention includes a pump 5 having an impeller 16 and a drive source 17 which are disposed in a pump casing 15, at least one pair of support pedestals 6 which are symmetrically disposed on an installation surface 2a for the pump 5, and a connecting mechanism 10 for connecting the pump 5 to at least one of an inlet passage 3 and an outlet passage 4. The connecting mechanism 10 is stretchable and contractible.
